Prosper Portfolio Highlights (at time of origination)*:

- Our risk team implemented a credit tightening in July aimed at removing certain populations of borrowers from originations on a go-forward basis.
- As a result of this credit tightening, the overall distribution of the book shifted slightly towards lower risk loans. This slight shift resulted in an overall portfolio coupon decrease of 45bps and an overall return estimate decrease of 26bps.
- Chargeoff levels in 2016H2 vintages continue to show meaningful improvement compared to 2016H1 vintages. We believe this is a result of a number of credit policy changes and tightening implemented in response to incremental stress that had been observed in the late 2015 and early 2016 vintages.
- Periodic delinquencies moved higher for 2016 and 2017 vintages. While this is expected for the younger vintages as they move towards peak delinquency months, this was a reversal of the trend for 2016Q2 and 2016Q3 vintages. We believe this is due, at least in part, to the overall consumer credit environment returning to more normalized levels of delinquency following years of below average delinquency and stress. We continue to keep a close watch on broader trends and are proactively changing credit policy in an effort to address future consumer stress as well as any incremental stress observed in prior vintages.

* Information presented is from the time of origination and based on original estimated loss rate.

John Goldston, Senior Director, Capital Markets – jgoldston@prosper.com
Cumulative Gross Loss Per Origination Dollar measures the cumulative principal charged off for a given vintage divided by the total principal originated in that vintage. "Gross" refers to the fact that curves do not account for the post-chargeoff recovery effort that Prosper conducts on behalf of investors. Currently investors are receiving 7-8% of chargeoff principal as a result of recovery operations. There can be no guarantee that these recovery rates will remain the same in the future.

Delinquency Per Origination Trend measures the cumulative principal dollars that are 16 or more days past due, and that are not charged off in a given month after origination. We believe this measure is useful for discerning emerging delinquency trends and is a leading indicator for the Cumulative Gross Loss Per Origination Dollar measure.

Remaining Balance by Vintage measures the cumulative principal dollars remaining in the pool that have not been charged off.

Cumulative Prepayment by Vintage measures the cumulative principal dollars associated with accounts that prepaid in advance of their scheduled payment schedule. The cumulative prepayment rate is calculated by dividing the cumulative dollar amount prepaid by the total original loan amount funded.
Notes & Disclaimers:

* All information presented in the Monthly Originations Summary and Prosper Portfolio Highlights is from the time of origination and based on original estimated loss rate.

i WA Coupon shows the weighted average coupon on a loan or group of loans and is calculated by (a) taking the weighted average contractual amortization rate for such loans, and subtracting (b) Prosper’s 1% servicing fee.

ii Estimated WA Loss (also known as Estimated Loss Rate) shows weighted average expected annualized loss rate on a loan or a group of loans and is calculated by taking estimated principal loss on charge-offs from such loans. Estimated WA Loss is provided as an informational tool, primarily to remind investors that it is inevitable that certain loans will charge off and result in a loss of investment capital. Estimated WA Loss is not a promise of future results and may not accurately reflect actual loss rates. Actual loss rates experienced may be impacted by, among other things, the size and diversity of the portfolio, exposure to any single Note or loan or borrower or group of Notes or loans or borrowers, as well as macroeconomic conditions. All estimates are based on the historical performance of Prosper loans.

iii Estimated WA Return (also known as Estimated IRR) shows the weighted average expected rate of return at the point of underwriting on a loan or group of loans, and is calculated by (a) taking the WA Coupon; subtracting (b) the Estimated WA Loss, estimated collection and recovery fees, estimated uncollected interest on charge-offs, and the loan trailing fee (where applicable); and adding (c) estimated collected late fees and estimated post charge-off principal recovery. Individual results may vary and estimates can change. Actual performance may differ from estimated performance, and the information presented is not intended to be investment advice or a guarantee of the performance of any Note or loan.

iv Loss/FICO is a measure of risk modeling conservatism relative to traditional credit metrics. Higher numbers indicate a more conservative view on risk modeling while lower numbers indicate a less conservative approach. Indexed to 2014.

v Coupon/FICO is a measure of return relative to traditional credit metrics (FICO). Higher numbers indicate more return per unit FICO. Indexed to 2014.

Prosper’s borrower payment dependent notes (“Notes”) are offered pursuant to a Prospectus filed with the SEC. Notes are not guaranteed or FDIC insured, and investors may lose some or all of the principal invested. Investors should carefully consider these and other risks and uncertainties before investing. This and other information can be found in the Prospectus. Investors should consult their financial advisor if they have any questions or need additional information.

The data, statements and figures in this presentation are based on Prosper’s analysis and calculations which, in turn, are based on various data sources compiled and analyzed by Prosper with all reasonable care to ensure they contain no omission likely to affect their import. Neither the analysis nor the underlying data sources have been verified by an independent third party.

This presentation includes forward-looking statements. Forward-looking statements inherently involve many risks and uncertainties that could cause actual results to differ materially from those projected in these statements. Where, in any forward-looking statement, we express an expectation or belief as to future results or events, such expectation or belief is based on the current plans and expectations of our management and is expressed in good faith and believed to have a reasonable basis, but there can be no assurance that the expectation or belief will result or be achieved or accomplished. All forward-looking statements speak only as of the date of this presentation and are expressly qualified in their entirety by the cautionary statements above. We undertake no obligation to update or revise forward-looking statements that may be made in this presentation to reflect events or circumstances that arise after the date made or to reflect the occurrence of unanticipated events.
